

UI/UX Testing

Jonah Ebent

24 March 2026

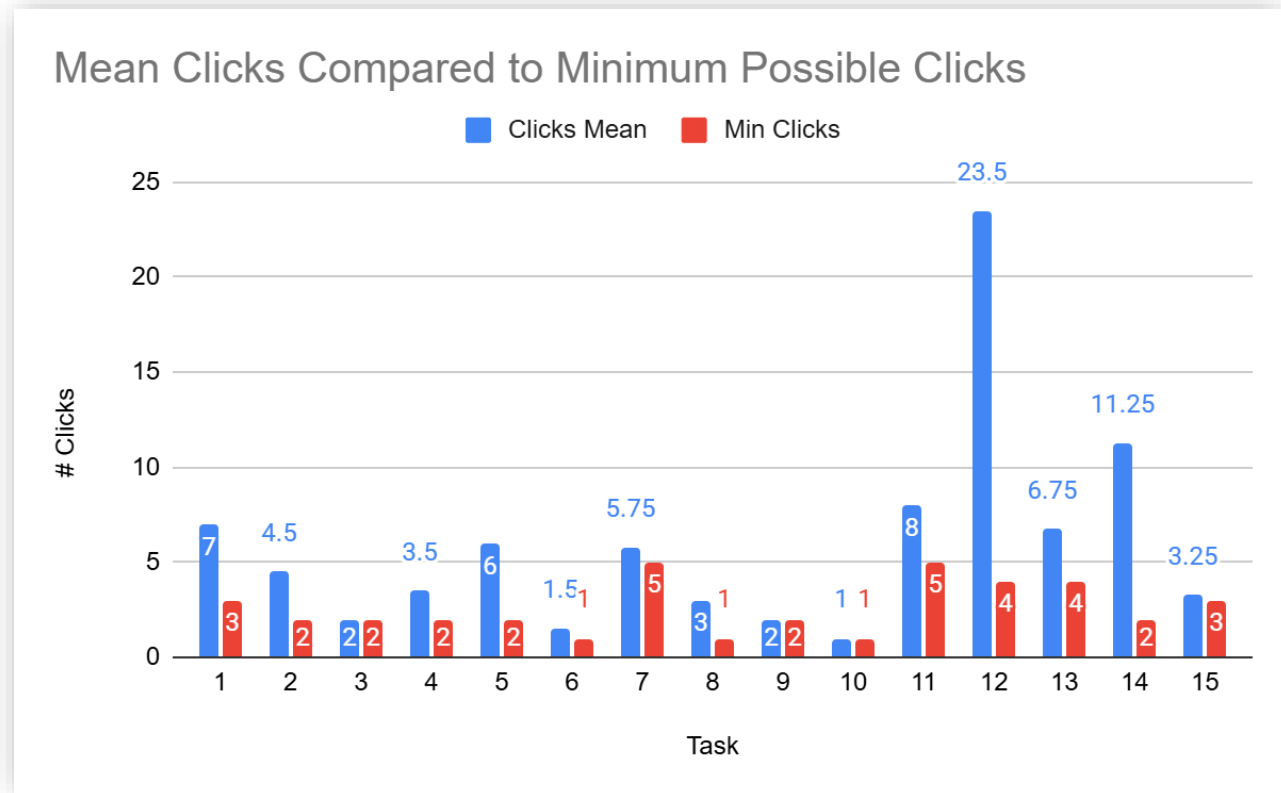

What Did I Do?

- Created a **list of tasks** that people can do on the Port
 - Ranged in difficulty and frequency of use
- Surveyed several students
- Recorded **time to complete**, **clicks**, and **number of hints**

Check Meal Plan Balance	View PrintAnywhere Install Instructions	View SWOP Openings	Access Handshake	Book a Study Room in the Center for Success
View Chapel Schedule	View Course/Fee Statement	View Unofficial Transcript	Apply for Austria	View Academic Calendar
Change Meal Plan	View Advising Worksheet	Leave the Carpooling Group	View the Schedule for the Pub	View Airport Shuttle Schedule

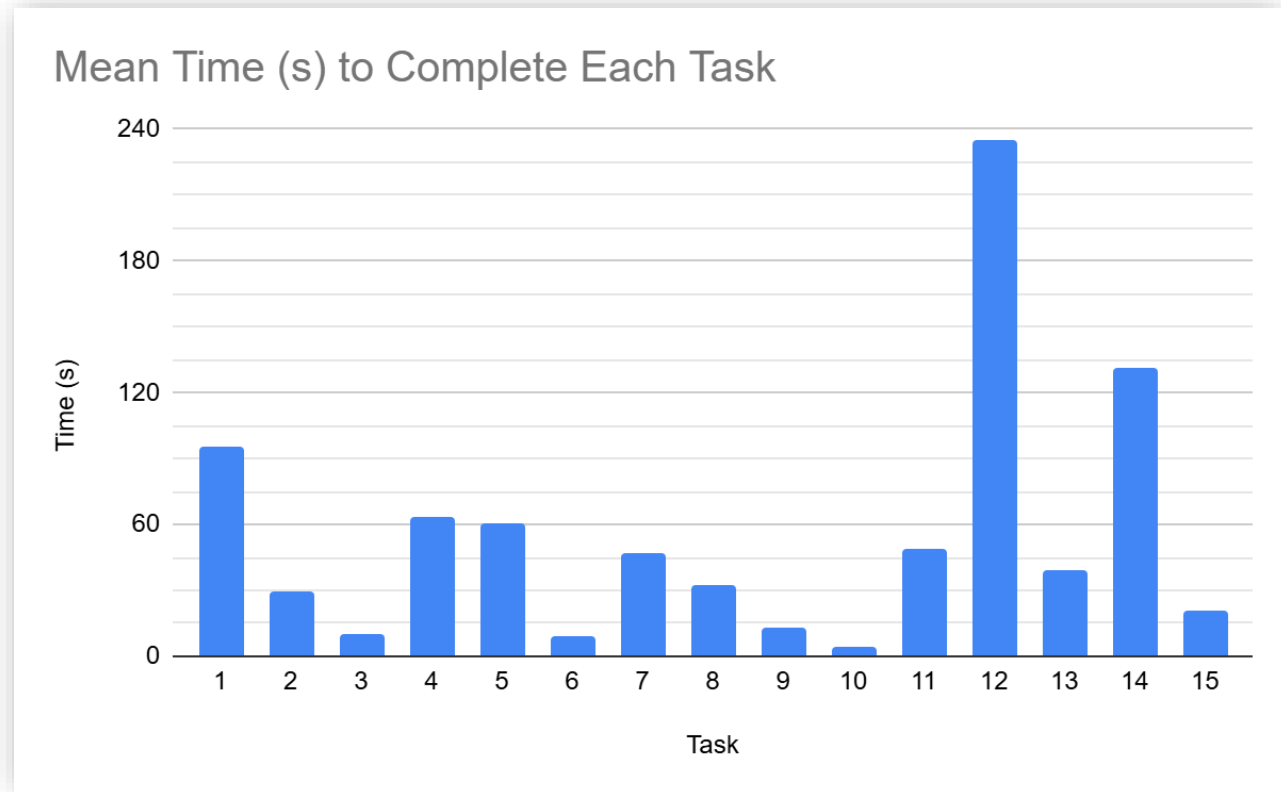

Number of Clicks

- Task with worst click rate is **Task 12: View Advising Worksheet**
- Most subjects confused when they click a link and there's **no loading indicator**

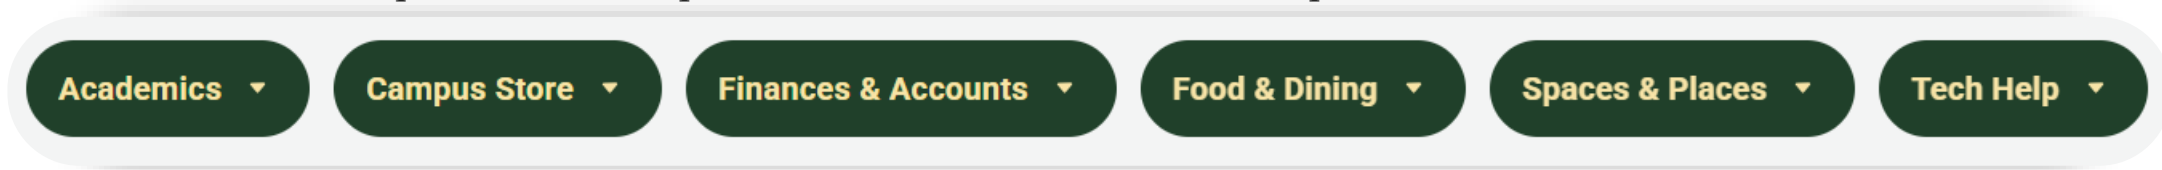

Time to Complete

- Tasks 12, 14, 1, 4, and 5 each take **more than a minute** to complete on average
 - 12. Advising Worksheet
 - 14. Pub Schedule
 - 1. Meal Plan Balance
 - 4. Handshake
 - 5. Study Room
- Unclear where to find the desired elements, usually went to wrong spot first

Observations

- Most students used the **search bar** for everything, which often gives irrelevant results. This is an **algorithm problem**, not a UI problem.
 - The quick-access chips on the Dashboard are a well-kept secret.

- **System errors** often made certain tasks impossible to complete.
- Some pages were **missing content** that seems obvious to include.
 - e.g., you can't reserve a study room in the Center for Success through the "Center for Success" page.
- **Non-responsive "portlets"** led to user confusion and frustration
 - e.g., lack of **loading indicators** led users to click on links multiple times, which caused unhelpful errors.
- Some things exist, but there's **no indication** of where to find them.
 - e.g., the Pub schedule is accessible by scrolling down on the Franciscan Dining webpage, but that is unclear to anyone looking for it

Limitations

Low sample size

- Suggestion: have a **single set of tasks and metrics** for the whole class and **aggregate** into a single dataset.

Limited time

- Each sample took **~20 minutes to complete**, and it was difficult to find students willing to spare 20 minutes.

Instruction bias

- My instructions may have been **confusing or inconsistent**, leading students to look in incorrect spots.

Port developers should...

- Improve the **search algorithm**.
 - Prioritize pages and tools over people
 - Use **semantic search** and keywords to match page relevance
- **Consolidate** or include information for multiple pages.
 - Unclear distinction between “Academic Advising” and “Academics and Course Registration”
 - “Center for Success” page should include the link to reserve a study room
- Ensure **responsive UI**.
 - Use loading spinners to indicate the system processing
 - Enable/disable buttons when links should not be clicked
- Introduce a bug report or **feedback form**.

Thank You
